ACCESSORY STRUCTURES

- Building/zoning permits are required for all accessory structures and shall be constructed in accordance with the performance standards listed in Table 1 (see reverse side).

- Accessory structures must be anchored to the ground. Buildings with foundations shall be secured with anchor bolts. Since most accessory structures are not provided with a foundation, the City allows buildings to be anchored by various methods which should be discussed with the Building Division prior to permit issuance.

- In addition to the accessory structures listed in Table 1, one storage shed up to 160 square feet in size is permitted on each lot in all zoning districts. The storage shed cannot exceed 12 feet in height and must meet the performance standards in Table 1.

- In all zoning districts the exterior finishes of accessory structures sized less than 160 square feet shall be constructed of quality weather resistant materials consisting of wood, metal, or engineered composite materials that are similar to the color palette of the principal structure.

- In all zoning districts the exterior finishes of accessory structures sized greater than 160 square feet shall be constructed of quality weather resistant materials in accordance with Table 1.

- Accessory structures are prohibited within any easement.

- No structure shall be placed within 20 feet of a public street right-of-way on a corner lot. The 20-foot measurement is between the property line and the building, NOT between the curb and building. An accessory structure in the rear 40 percent of a corner lot abutting a local street must set back a minimum of 30 feet from the property boundary line.

- Temporary accessory structures including tents that consist of metal or fiberglass poles, metal hoops and, PVC, cotton or nylon fabric covering materials are prohibited except as permitted in conjunction with an approved conditional use, permitted camping area, or special event.

- At-grade structures such as basketball courts, tennis courts, patios, and dog kennels must meet the established accessory structure setbacks for the zoning districts in which they are located. Swimming pools and surrounding apron/decks also must meet the established accessory structure setbacks for the zoning districts in which they are located. These structures are not included in the total allowable accessory structure square footage as regulated in Title 11-3-3 of the City Code (shown on Table 1), as long as the total impervious surface of the lot does not exceed 35 percent of the rear area of the lot measured from the rear building line of the house to the rear lot line.

- Accessory structures intended to house animals must be set back at least 60 feet from all property lines and at least 300 feet from a dwelling on another property.

*All accessory structures, regardless of size, must be constructed in a structurally sound manner.*

*For accessory structures on corner lots that abut the street, please see the other side of this handout.*

*Accessory structures cannot be located between the principal structure and the front lot line except where the site is five acres or greater.*

*Accessory structures cannot exceed the height or foot print of the principal structure.*
